

Title: Gaming table for use with gaming chips incorporating an electronic microchip

ABSTRACT OF THE DISCLOSURE

The gaming table 10, for use with electronic memory microchip gaming chips, includes a tabletop 12 including a gaming chip storage rack 22 and a test station including a communication unit adapted to exchange information with the memory of a gaming chip 25 in a test area 28 by means of an antenna device 29, the communication unit being associated with a digital processing unit delivering an output message to the screen 30 of a display device. The layout of the table 10 is such that the screen 30 of the display device is physically separate from the casing of the test station and the test area 28 and the screen 30 are disposed close together on the tabletop 12, beside the rack 22 and in reach and in view of the operator 18.

The gaming table is usable in casinos and gaming rooms.
